

Recitation Exercises

Qualitatively sketch the behavior of the energy levels for the following potentials

Qualitatively sketch the energy level diagrams for the following systems. Identify the HOMO and LUMO

The "left" and "right" states get their name because one often draws them as

1) Show that ψ_L and ψ_R are not eigenfunctions of \hat{H}_{HS}

2) Show that the energy of ψ_L and ψ_R is $\frac{\Delta E}{2}$. Since they are not eigenfunctions one must find the average energy $\langle E \rangle = \langle \hat{H}_{HS} \rangle$
